Infrared heating unit

End use proposed: heating

Particularly efficient in terms of performance, infrared radiant heating is the best technological solution for buildings with high ceilings and frequent air exchanges. Infrared heating offers substantial savings, as it heats people and objects directly rather than the ambient air.

FINANCIAL INCENTIVE

Capacity	Financial incentive
Per unit of 1000 Btu/h installed	\$2.50

To take advantage of this amount, the client must sign a standard contract ($> 75,000 \text{ m}^3$) with their sales representative or conclude a simplified contract ($\leq 75,000 \text{ m}^3$) with a **Gaz Métro Authorized Partner**.

The financial incentive is applicable supplementary to the CSP/RCSP and can also be applied to retain current customers. The total amount of the incentive must not exceed admissible expenses. This amount is subject to change without notice.

The appliances admissible for this energy efficiency program are those offered by the authorized distributors listed on the following page.
